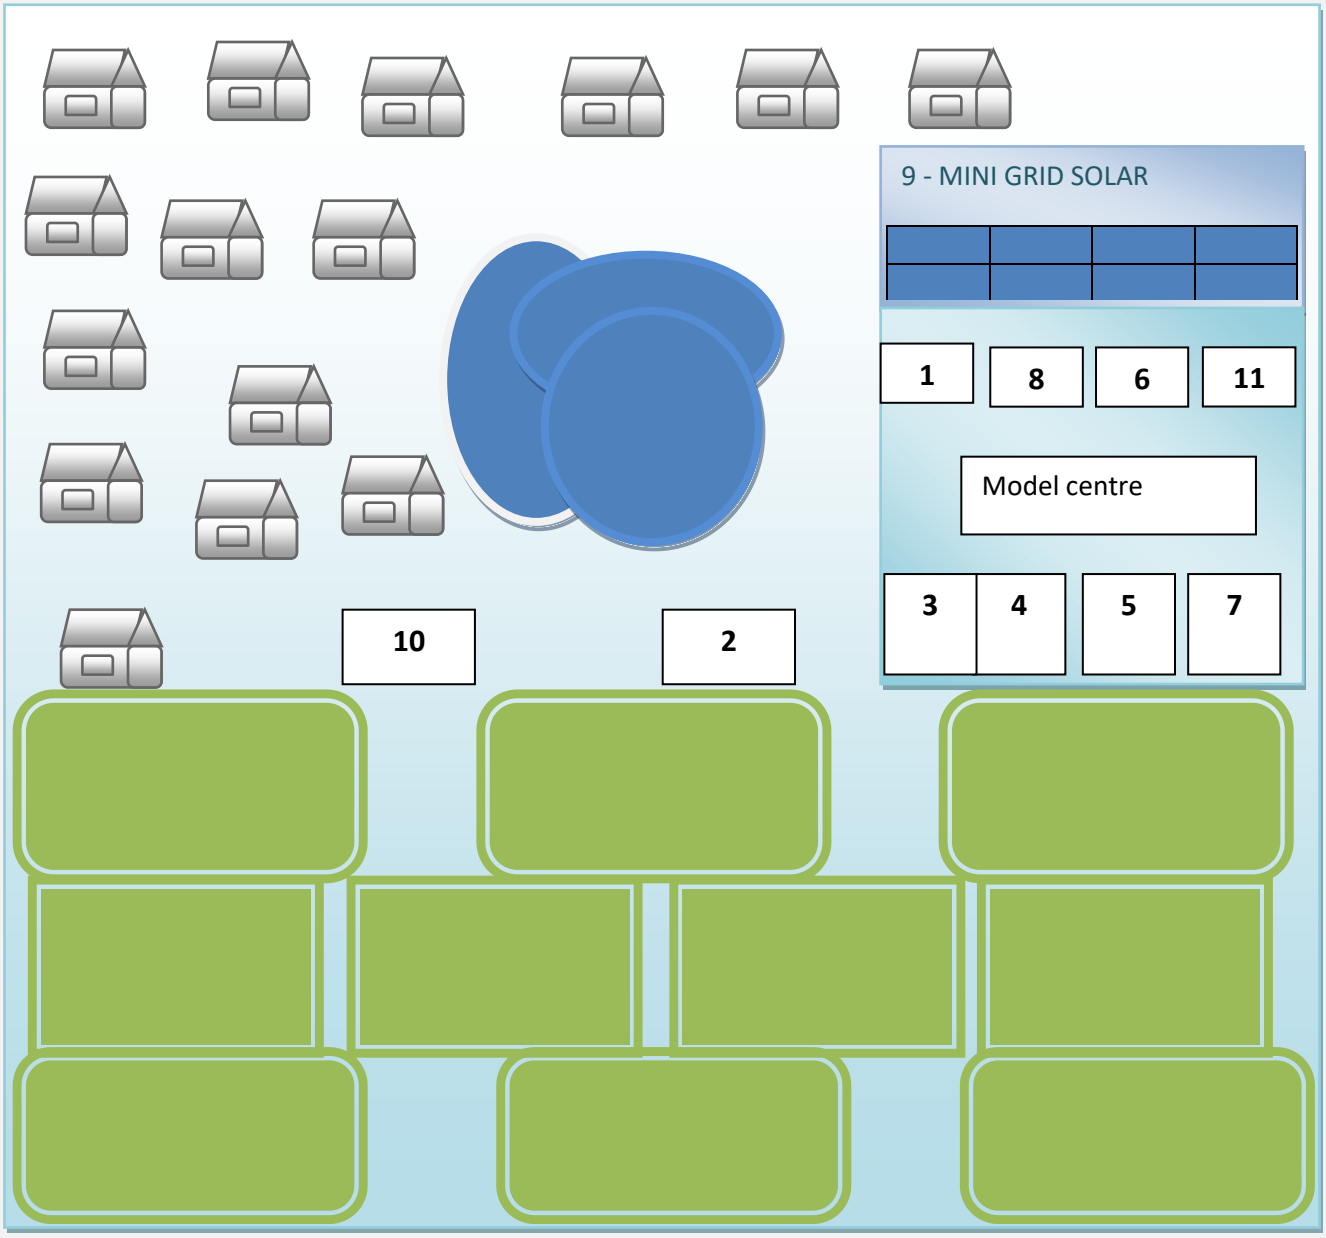
Model centre for RURAL clusters



1 - RO PLANT / SOLAR WATER HEATER (COLD/HOT WATER)
2 - PUBLIC TOILET
3 - CHARGING POINT/ ELECTRIC VAN PARKING
4 - HEALTH CARE
5 - EDUCATION
6 - VILLAGE MALL
7 - CASH COUNTER
8 – VILLAGERS SUPPORT CENTRE
9 - MINI GRID SOLAR POWER PLANT
10 – WASTE AND WATER MANAGEMENT
11 – RESEARCH LAB

AAYUSH CENTRE

One smart centre to provide assistance to smart village

To provide, green energy, food, water, employment, education, health and agricultural support etc.

Main Aspects of CENTRE

1. **MINI GRID SOLAR POWER PLANT:** To provide 24*7 electricity to each and every house. (Energy harvesting in rural areas)
2. **WASTE AND WATER MANAGEMENT:** To provide solution for waste management by installing vermin compost and biomass gasifier plants and other sustainable technologies.
3. **HEALTH CARE CENTRE:** To provide medicine and first aid box and online health support to villagers.
4. **EDUCATION CENTRE:** To provide smart education and training for skill development in different sector to each and every child in the village and to help them grow learn and practice sustainable living.
5. **VIILLAGE MALL- DEVELOPING LOCAL ECONOMY:** To purchase the fresh vegetable, fruits and grains from villagers at the best price and to sell them in village mall and distribute to the city. To provide all the necessary items to villagers which they can avail in village instead of cities.
6. **VILLAGER'S SUPPORT CENTRE:** To provide offline/online supports to the villagers regarding GOI schemes and Aadhar card, electricity bill ticket booking agriculture banking etc. To keep an account of villagers and help them in farming, cultivation etc. (making awareness i.e., RIGHT TO VILLAGER.)
7. **RESEARCH LAB:** To provide scientific assistance to villagers/ farmers like soil testing water testing weather forecast etc.
8. **SOLAR CHARGING POINT:** To provide encouraging mobility by electrical vehicle in village for transportation and charging point for solar lantern etc.
9. **GUEST HOUSE / KITHECN TECHNOLOGIES:** To provide homely atmosphere to the employees at centre. To provide food and shelter to homeless/needy.
10. **SANITATION & PUBLIC TOILET:** To provide sanitation for individual household and public toilets for villagers and tourist.

Manohar & Amar

1. MINI GRID SOLAR POWER PLANT

The main objective of mini grid solar power plant is to install off grid/on grid/hybrid solar power plant to provide 24X7 electricity to every house in the village.

- **Maximum capacity of mini grid solar power plant**: 250kwp with/without battery bank with net and gross metering facility and distribution network if not available.
- **Minimum capacity of mini grid solar power plant: As** per design and load calculation per house in the village for 24X7 electricity.
- **Future additional project for Renewable energy**: wind mill, mini hydro power plant, biomass etc. (As per design and availability for required scientific data and parameter at particular site.
- **Provision of charging point** for electric vehicle, solar lantern etc.

2. WASTE AND WATER MANAGEMENT

The main objective of Waste management is to collect the entire domestic/Agricultural waste to convert it into energy, biogas and compost and to recycle.

- **Vermi Compost plant**: To collect all the household/ agricultural dry and wet biodegradable waste to convert it into compost fertilizer and provide it to farmers.
- **GASIFIER PLANT**: A small gasifier plant at every centre to burn the waste to generate heat energy/ electricity and biogas for further use in cooking.
- **Dust bin and collector**: To make the village clean and make the use of dustbin and compost chamber in practice for all villagers and farmers. Encouraging every villager by giving reward for making village clean and green.
- **RO PLANT:** To provide clean drinking water to the villagers.
- **Water management and drainage system** to restore water body by constructing pond, rain water harvesting system, use of irrigation, sprinkler system etc.

Manohar & Amar

3. HEALTH CARE CENTRE

The main objective of Health care centre is to provide health support and benefits to each and every person in the village.

- **First aid box and emergency ward** – To provide immediate diagnosis/help to injured/ ill patient. Providing primary medication and referring to nearby hospital in case of further treatment.
- **Provision of pathology lab** at health care centre, if possible, with basic tests.
- **One doctor** (for internship) and **one pharmacist and nurse** (on permanent basis) at every health care centre.
- Help/support to patient by **Connectivity/ coordination** to nearby **government** and **private hospitals** and **nursing home**.

4. EDUCATION CENTRE

Manohar & Amar

The main objective of EDUCATION CENTER is to provide smart and digital education to every child in the village and to make aware of advanced technologies give them best environment / atmosphere to learn, grow and succeed.

- **Smart class**: Special morning/evening classes apart from routine classes for children by education body and volunteers to provide them all smart and digital education and develop skills in different areas.
- **Campaign:** With help of students and volunteers to organise campaigns and events for education and health program for villagers (children, woman and elders)
- **Tuition/counselling and special class for special students**: With help of volunteers to provide tuition for weak students, counselling, help and support for further education.
- **Coordination with primary school and Aanganwadi centre:** To provide assistance and help to children by providing them study material, scholarship, food, smart education.
- **Reserving regional knowledge:** Every village has its own importance and best sustainable practices. To transform those practices and stores data and knowledge for future generations.
- **Collaboration with college and university:** To provide information / assistance to bright student for further studies in university and college.

- **Sports program**: To organise sports program in village and encourage children to participate and sports and physical activities and provide them help/support for further goal.

5. VILLAGE MALL

(Developing local economy)

The main objective of VILLAGE MALL is to provide all the necessary items to villagers what they can avail in village instead of cities and to purchase the fresh vegetable, fruits and grains from villagers at the best price and to sell them in village mall and distribute to the city.

- **Cash counter**: To sell all the fresh vegetable, fruits and grains grown by local farmers in the village at the best price. To purchase all the general items and goods for daily needs from one shop.
- **Goods rack**: To pick up all the items for daily needs by self-choice, for easy shopping experience.
- **Local Online shopping machine and smart box**: To buy anything online one can easily get it by just swiping and adding necessary items to the card at one big computer screen at village mall and the same will be delivered in smart box.
- **Purchasing seasonal crops**: providing services for buying and selling seasonal crops from farmers so that benefited financially.
- **Village revenues**: Identifying the common places like ponds and other government empty lands and develop projects like aquaculture, planting productive crops and recreational spaces.

Manohar & Amar

6. VILLAGER'S SUPOORT CENTRE

The main objective of VILLAGER'S SUPOORT CENTRE is to provide every possible online/offline help/support like banking, ticket booking, electricity bill etc. to the villagers and farmers.

- **Women empowerment:** Supporting women entrepreneurship in cluster of villages by making aware of possible start-ups initiatives.
- **Computer centre**: To provide all kind of online help and support from any documentation work, banking, electricity bill, Aadhar card, ticket booking etc.
- **HELP/ Support counter:** To provide information to the villagers about government scheme and program and following up for the same to the

benefits of villagers. Providing agricultural support seeds, scientific farming etc.

- **Coordination** between **villagers** and **local police station** to provide safety and justice to villagers.
- **Weather forecast and other important information DISPLAY:** To make villagers aware of weather and helping them in farming/cultivation by providing all scientific support by construction of water body reservoir etc.
- **Coordination with local markets village mall and city market** to provide all kind of help and support to farmers.

7. RESEARCH LAB

(Incubation centre)

The main objective of research lab is to provide scientific assistance to villagers like soil testing water testing etc.

- **Lab:** Equipped with all the basic necessary instruments to provide scientific data and result to the farmers and villagers like soil and water testing etc.

Manohar & Amar

8. SOLAR CHARGING POINT

The main objective solar charging point is to provide a platform for solar vehicle charging, solar lantern charging etc.

- **Charging point:** provision of safe box for mobile charging with lock, solar lantern charging and long cable support for battery charging for solar vehicle.
- **Solar vehicle:** To provide eco-friendly transportation service to villagers in local.

9. KITCHEN TECHNOLOGIES AND GUEST HOUSE

The main objective of Kitchen and guest house is to provide homely atmosphere to employees at centre.

- **Cooking technologies:** Introducing and making awareness on cooking technologies for low smoke stove, biogas plants from cow dung.
- **Guest house:** providing facilities of guests and for visitors on research purpose.

10. SANITATION & PUBLIC TOILET

The main objective of is to provide sanitation & public toilet facilities to villagers.

- **Sanitation:** making awareness on menstrual cycle and helping them to practice hygiene conditions.
- **Bio Toilets:** Installing bio toilets so that villagers get aware of benefits of not practicing open defecation.
- **Public toilets:** Identifying open defecation area and construction of toilets.

Benefits of executing this project:

As we all know India is a fastest developing economy and major development changes going in cities. This leads to migration and effects increasing cost of living with poor living standards.

Due to development of local economy in rural clusters this contributes the revenue to the Indian economy.

By providing job opportunities in rural areas so that can reduce the migration.

As rural villages generate own revenues can reduces burden on allocating funds from central and state governments for development purposes.

There are so many benefits environmentally, socially and economically which is final goal to every individual to live better life.

This model may be helpful to provide basic access to services in African countries and other developing countries.

Contact if interested in executing this project in rural clusters.
